Technical Skills

Languages: Python, JavaScript, SQL, HTML/CSS, C++, Swift

Frameworks: Next.js, Express.js, Tailwind CSS, SwiftUI

Tools and Technologies: Git/GitHub/GitHub Pages, Apache Airflow, Xcode, MySQL, Dataverse API

Experiences

Metropolitan Transportation Authority - New York, NY

Jan 2025 - Present

Data Engineering Intern

- Maintain and design scalable backend data systems and ETL pipelines for high availability and performance using MySQL, MSSQL, Python, AWS, and Azure to streamline data processing.
- Build and deploy backend services for 3 daily automated reports, integrating Apache Airflow with over 10 DAGs and managing data ingestion workflows.
- Collaborate cross-functionally with engineers and analysts to improve pipeline reliability, scalability, and deployment strategy.

PENCIL Inc. - Origen Consulting - Remote

Jul 2024 - Aug 2024

Web Development Intern

- Developed a full-stack environmental awareness webapp using Next.js, Prism ORM, and Firebase Auth.
- Outlined and maintained a Tailwind CSS design system with reusable components for page scalability and consistency.
- Collaborated closely with project leads to implement over 20 wireframes into a smooth UI/UX

Break Through Tech - Bitly - Remote

Jan 2023

Software Engineer Intern

- Produced and launched a full-stack web service using React and MySQL, implementing backend API routes for event creation and user interactions with CRUD operations.
- Designed and structured the homepage of the web app for smoother UI with Figma and integrated seamless routing between front-end pages to provide an intuitive and seamless user experience.

Break Through Tech - Accenture - Hybrid - New York, NY

Aug 2022 - Dec 2022

Machine Learning Engineer Intern

- Performed sentiment analysis on over 80,000 tweets related to recent Apple and Samsung product releases by employing natural language processing techniques to analyze public sentiment for business insights.
- Extracted real-time tweets from X's API over a week to construct an accurate unsupervised learning sentiment model utilizing Dataiku.

Projects

Jeopardy With Friends! - Multiplayer Jeopardy Game (<https://github.com/csci-499-fa24/Team2>)

- Implemented a real-time Next.js app with a team of 6 members, enabling synchronized gameplay with Socket.io to handle private rooms and interactive game boards.
- Created user authentication with Firebase Auth, Firestore, and real-time waiting rooms.
- Practiced continuous integration and testing using Jest to ensure code reliability and maintainability in a team-driven development environment.

Education

Hunter College - New York, NY

Dec 2024

Bachelor's in computer science and minor in math and Japanese language

- Honors: Daedalus Scholars Program, Dean's List (2022-2024) (GPA: 3.85/4.00)
- Relevant Coursework: Practical Web Dev, Database Management, iOS Dev, Digital Product Dev
